About Me

Software Engineer with hands-on experience building scalable full-stack applications using Next.js, Java, and the MERN stack, and developing AI-powered systems with RAG pipelines and LLM integration (Google Gemini API, LangChain). Skilled in designing RESTful APIs, implementing secure authentication, and applying strong fundamentals in Data Structures & Algorithms, OOP, and DBMS to build production-ready systems.

Education

Bachelor of Technology – Computer Science & Engineering 2022 – 2026
Galgotias University
CGPA: 8.3/10

Class XII 2020 – 2021
Lucknow Public School
Percentage: 93.2%

Technical Skills

Languages: Python, Java, JavaScript, TypeScript

Frontend: React, Next.js, Vite, Tailwind CSS, Shadcn UI, HTML, CSS

Backend & AI: Node.js, Express.js, JDBC, Google Gemini API, LangChain, RAG

Databases: MySQL, MongoDB, PostgreSQL (Supabase), pgvector

Cloud & Tools: AWS (EC2, S3, IAM, VPC), Git, GitHub, Prisma ORM, Clerk, Postman

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks, REST APIs, JWT Authentication

Projects

Forge – AI-Powered Full Stack App Builder [Live](#) | [GitHub](#)

Tech Stack: Next.js 15, TypeScript, Tailwind CSS, Shadcn UI, Prisma, Supabase (PostgreSQL), Clerk, Google Gemini API, Arcjet

- Developed a platform that transforms natural language prompts into production-ready React applications using Next.js 15 and TypeScript.
- Powered AI-driven code generation with the Google Gemini API, enabling iterative app improvements through the Cline SDK.
- Modeled relational data with Prisma ORM and Supabase to manage project history and subscriptions across 50+ user sessions.
- Reduced code preview and render time to under 2 seconds by engineering a live preview environment using Sandpack.
- Launched a tiered, credit-based subscription system (Free, Starter, Pro) offering up to 150 AI generations/month with Arcjet-backed rate limiting and one-click ZIP export.

Cortex – AI-Powered Codebase Explorer [Live](#) | [GitHub](#)

Tech Stack: React, TypeScript, Vite, Node.js, Express.js, Prisma ORM, PostgreSQL (Supabase), pgvector, Google Gemini API, LangChain

- Built a full-stack RAG application enabling developers to connect any public GitHub repository and query its codebase in natural language.
- Engineered an automated indexing pipeline that clones repositories, chunks source files, and generates vector embeddings, validated on repositories with 100+ files.
- Implemented semantic search with PostgreSQL and pgvector, retrieving relevant code chunks in under 3 seconds for AI-generated answers.
- Integrated Google Gemini API with LangChain to power a RAG pipeline, enabling context-aware Q&A across 1,000+ lines of codebase context per query.
- Managed authentication and workspace access with Clerk, supporting 3+ repository connections per user account.

NoteGenius AI – Full Stack AI Notes Generator [Live](#) | [GitHub](#)

Tech Stack: React, Tailwind CSS, Redux, Node.js, Express.js, MongoDB, Gemini API

- Developed a full-stack MERN application, designed to support 100+ concurrent users, that generates structured, exam-ready notes.
- Automated content generation via the Gemini API, cutting note-creation time by approximately 70% versus manual writing.
- Set up JWT-based authentication with persistent session handling, supporting reliable access for 100+ concurrent users.
- Optimized RESTful APIs for note generation, storage, and retrieval, achieving average response times under 300ms.
- Enabled PDF export and user history tracking to improve engagement and retention.

Certifications

- **AWS Academy Graduate – Cloud Architecting** – AWS Academy
- **Web Full Stack Developer Internship** – Eduskills
- **Java Programming** – Oracle Academy
