About Me

Software Engineer specializing in Generative AI, with hands-on experience building RAG pipelines, LLM integrations (Gemini, Groq), and semantic search systems using LangChain, LangGraph, HuggingFace, and vector databases (Pinecone) deployed end-to-end on AWS with Docker. Also skilled in full-stack development with Next.js, Python, and the MERN stack, with strong fundamentals in Data Structures & Algorithms, OOP, and DBMS.

Education

Bachelor of Technology – Computer Science & Engineering

2022 – 2026

Galgotias University

CGPA: 8.3/10

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL

Frontend: React.js, Next.js, Vite, Tailwind CSS, Shadcn UI, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI, JDBC, REST APIs, JWT Authentication, Prisma ORM, Clerk Authentication

AI/ML: RAG (Retrieval-Augmented Generation), LangGraph, LangChain, LLM Integration (Google Gemini API, Groq), HuggingFace Embeddings, Semantic Search, Prompt Engineering

Databases: MongoDB, PostgreSQL (Supabase), Pinecone

Cloud & DevOps: AWS, Docker, Nginx, Git, GitHub, Postman

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks

Projects

Medora – AI Medical Assistant

[Live](#) | [GitHub](#)

Tech Stack: React, TypeScript, Vite, Tailwind CSS, Clerk, FastAPI, LangChain, HuggingFace, Pinecone, Groq, Supabase (PostgreSQL), Docker, AWS EC2, Amazon ECR, Nginx

- Architected and developed a full-stack AI Medical Assistant using RAG, integrating React, FastAPI, LangChain, and Pinecone to deliver grounded, source-cited answers from a 637-page medical knowledge base.
- Engineered a conversational RAG pipeline with query rewriting and semantic retrieval, indexing the corpus into 4,201 chunks with 384-dimensional HuggingFace embeddings stored in Pinecone.
- Achieved 100% retrieval accuracy (25/25 in-domain, 5/5 out-of-domain rejection) across 30 evaluation questions using a similarity-threshold filter.
- Integrated Groq LLM with LangChain to generate context-aware answers with source references, secured via Clerk authentication and persistent conversation history in Supabase PostgreSQL.
- Deployed a containerized FastAPI backend to AWS EC2 via Docker and Amazon ECR, using Nginx and Let's Encrypt for HTTPS; frontend deployed on Vercel.

Forge – AI-Powered Full Stack App Builder

[Live](#) | [GitHub](#)

Tech Stack: Next.js 15, TypeScript, Tailwind CSS, Shadcn UI, Prisma, Supabase (PostgreSQL), Clerk, Google Gemini API, Arcjet

- Architected an AI-powered platform that transforms natural language prompts into production-ready React applications using Next.js 15 and TypeScript.
- Powered AI-driven code generation with the Google Gemini API and Cline SDK, enabling iterative app improvements.
- Modeled relational data with Prisma ORM and Supabase, managing project history and subscriptions across 50+ user sessions.
- Reduced code preview and render time to under 2 seconds by engineering a live preview environment with Sandpack.
- Launched a tiered, credit-based subscription system (Free, Starter, Pro) with up to 150 AI generations/month, Arcjet-backed rate limiting, and one-click ZIP export.

NoteGenius AI – Full Stack AI Notes Generator

[Live](#) | [GitHub](#)

Tech Stack: React, Tailwind CSS, Redux, Node.js, Express.js, MongoDB, Gemini API

- Developed a full-stack MERN application supporting 100+ concurrent users that generates structured, exam-ready notes.
- Automated content generation via the Gemini API, cutting note-creation time by approximately 70% versus manual writing.
- Implemented JWT-based authentication with persistent session handling for reliable access across 100+ concurrent users.
- Optimized RESTful APIs for note generation, storage, and retrieval, achieving average response times under 300ms.
- Enabled PDF export and user history tracking to improve engagement and retention.

Certifications

- **AWS Academy Graduate – Cloud Architecting** – AWS Academy
- **Web Full Stack Developer Internship** – Eduskills
- **Java Programming** – Oracle Academy
